Anti-Biofilm Activity of a Polysaccharide from Marine B. licheniformis

By S. M. Abu Sayem

LAP Lambert Academic Publishing Jan 2014, 2014. Taschenbuch. Book Condition: Neu. 220x150x6 mm. Neuware - A ca. 1800 kDA polysaccharide having simple monomeric units of -Dgalactopyranosyl-(12)-glycerol-phosphate was found to exert an anti-biofilm activity against both Gram-positive and Gramnegative bacteria without any bactericidal effect. This polysaccharide was extracted from a Bacillus licheniformis strain associated with the Mediterranean marine organism Spongia officinalis. Unlike most of the anti-biofilm compounds, the mechanism of action of the compound was most likely independent from quorum sensing, as its structure is unrelated to any of the so far known quorum sensing molecules. Other experiments revealed that treatment of abiotic surfaces with the present polysaccharide blocked and/or reduced the initial adhesion and biofilm development of strains such as Escherichia coli PHL628 and Pseudomonas fluorescens. In addition the polysaccharide reduced the cell surface hydrophobicity of the tested strains which appeared to be a cause of reduction of cellcell or cell-surface interaction during the initial attachment stage of biofilm development. Further research on such surfaceactive compounds might help in developing novel and more potential anti-biofilm molecules. 108 pp. Englisch.

Reviews

Absolutely essential read publication. it absolutely was writtern very completely and valuable. It is extremely difficult to leave it before concluding, once you begin to read the book. -- Sarai Lebsack

Thorough guide for book enthusiasts. I am quite late in start reading this one, but better then never. Your lifestyle span will be transform when you total reading this article book. -- Lindsey Larson
